

CMX 2000/10

The CMX 2000 inline mixer incorporates powders into liquids and mixes these materials reliably and consistently in a batch process. Its multi-level design and unique pumping stage enables processing of high viscosity products without any additional aggregates.

The Complete System

The CMX system is usually supplied with a solid material dosing feeder and mixing containers. Depending on the application and the requirements of the customer, the solid material can be fed via a bulk bag unloader, a funnel, sack-emptying boxes or directly from the bag via a suction lance.

Technical Data

Typical batch sizes	200 - 2500 l
Circulation rate	32000 l/h
Diffusion of solids max.	8900 kg/h
Motor power	30 kW
Ident. No.	000CMX200010
