- Seven user-selectable languages

## Detailed Process Information at a Glance

Displaying the status of up to four parameters simultaneously, AquaPro provides a complete picture of process status on a single instrument. This multi-channel capability reduces both the number of meters required and the time required for installation, maintenance and upgrades.

AquaPro's large 4.3" (109.22 mm) backlit color display leads the industry in visibility and ease of use. Color error-warning flags are visible in any lighting conditions.

The unit is built for the realities of utility and industrial operations. With a UV-resistant polycarbonate material case and NEMA 4X, IP66 waterproof rating, AquaPro can be pipe-, panel-, or wall-mounted in the most punishing work environments and the built-in USB data port makes it simple to download measurement data or upload new software in the field or on the factory floor.

## An Analyzer for Today and Tomorrow

Users select from seven languages — English, Spanish, French, German, Italian, Portuguese, and Chinese — and configure the AquaPro via clear, plain-language menus. Operation is straightforward and intuitive for all parameters — from basic pH measurements to complex free chlorine.

AquaPro provides simple interface to PLC, SCADA and other PC-based control systems and compatibility with all current industry data communication protocols — MODBUS RTU over RS485 or RS232, DeviceNet, Profibus, Ethernet/IP, Modbus TCP, and CANopen. It can be easily updated to support any future protocols using our unique modular design.

AquaPro is fully compatible with a wide range of liquid analytical sensors — both analog and digital — allowing measurement of many parameters, including:

- pH/ORP
- Conductivity (including resistivity, concentration, salinity and TDS)
- Dissolved oxygen
- Dissolved ozone
- Free chlorine
- Turbidity
- Suspended solids

## Growing with You

The AquaPro is ready for today's most diverse process analysis tasks. With its modular design, it is also designed to grow and adapt as needs evolve:

**Additional capacity:** With up to four sensors — analog or digital — per instrument, users can monitor more parameters by simply adding plug-and-play cards.

**Field-configurable upgrades:** Using the USB data port, new firmware can be quickly installed via removable digital storage media. This means new features and capabilities without changing hardware.

**Quick configuration:** The configuration of an existing unit can be easily saved and copied to a newly installed unit using removable USB data storage media.

**Flexible communication:** Supporting all major communication protocols, AquaPro can be used with a wide range of data systems for different applications.

**Local languages:** With seven user-selectable languages, the AquaPro is ready to go wherever new facilities go online.
